**SMART
AUTOMATION**

HOSPITAL SOLUTIONS

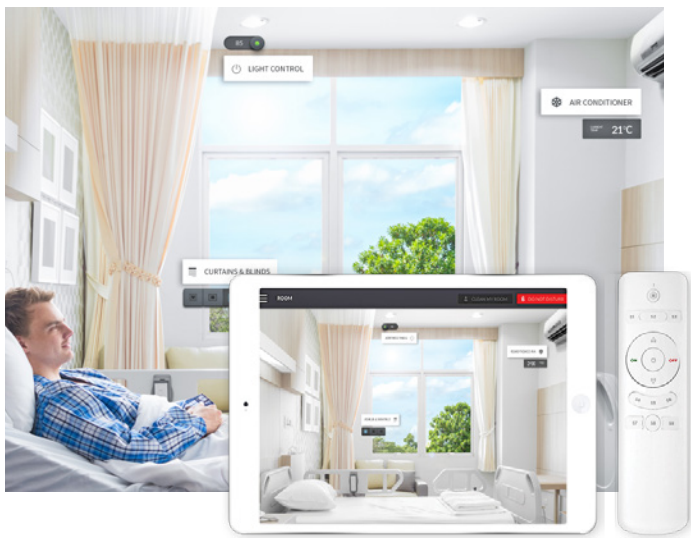

Patient Comfort | Operational Effectiveness | Energy Efficiency

BuildTrack's Hospital Solutions are designed to enhance the patients stay experience and improve the operational effectiveness for the hospital staff while significantly lowering the energy consumption of the hospital.

BuildTrack solutions include Wired and Wireless Smart Automation for Patient Rooms, Nurse Call Systems with Kiosks and Smart Apps, IBMS for centralized facility control and wireless energy efficiency sensors to lower electric bills.

PATIENT COMFORT

Patient Room Automation

Smart App (or Remote) that allows patients to control all aspects of the patient room, which includes lighting, AC, Curtain/Blinds, TV/DTH and integrated nurse call abilities.

Deployment available in both wired and wireless formats.

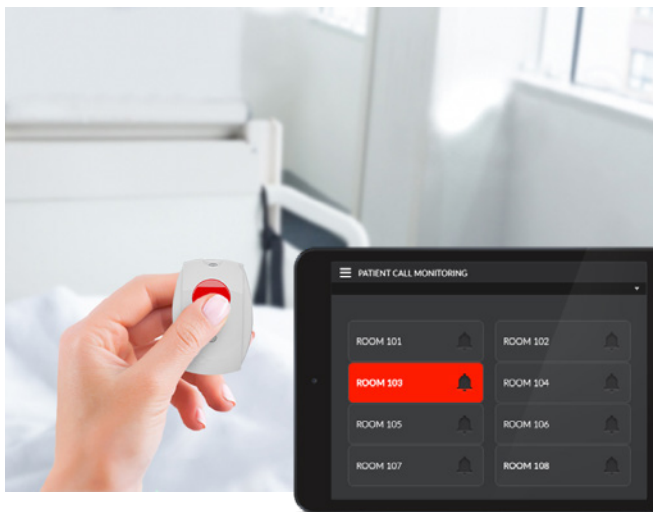

ENERGY EFFICIENCY

Wireless Motion Sensor Control of Lighting & AC's

Our Wireless Motion Sensors and Switch Nodes can be used to ensure that lights, fans, exhaust fans or any energy devices are turned ON/OFF based on motion sensed in aisles, waiting areas, doctor offices and examination rooms. Our wireless daylight sensors further improve energy efficiency if daylight is sufficient.

OPERATIONAL EFFECTIVENESS

Nurse Call Systems

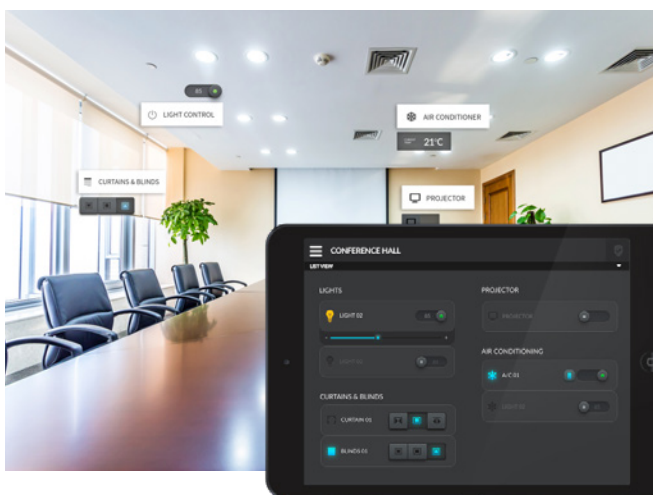

Our centralized Nurse Station Kiosks, and Smart Apps enable monitoring of patient call buttons. Wireless and wired call buttons along with pull cords provide multiple deployment options.

Data analytics of call response times provided by the system helps in planning.

Building Management System [BMS]

The ultimate centralized Smart App based control for all electrical switches and equipment within the Hospital. Central monitoring of all sensors intended for safety (fire, gas), security (intrusion), operating parameter (temperature, humidity) and more.

Conference Room Automation

Smart App based control of all conference room features – lighting, AC, blinds, projector/projector screens and more. Also, allows for conference room reservation via Smart App.
